Project Synopsis

Title: Event Management System	
Name: Vrishabh Jawa	Date: 24/03/2006
Admission No: 23SCSE1420109	Section: 50
Enrollment No: 23131420166	Submitted To: Ms. Isha Chopra

Introduction

The Event Management System is a web-based application designed to simplify the process of organizing and managing events. It allows users to register, explore events, and participate easily, while providing organizers with tools to manage event data efficiently.

Objectives

The main objective of this project is to develop an efficient system that reduces manual effort and provides a centralized platform for managing events. It aims to improve user experience and ensure proper event coordination.

Features of the System

- User Registration and Login
- Event Creation and Management
- Event Listing
- Booking System
- Admin Control Panel

Technologies Used

Frontend: HTML, CSS, JavaScript

Backend: PHP

Database: MySQL

System Modules

- User Module: Handles user registration and login
- Admin Module: Manages events and users
- Event Module: Handles event creation and details
- Booking Module: Manages event registrations

Advantages

- Reduces manual work
- Easy to use interface
- Fast and efficient
- Centralized data management

Future Scope

The project can be enhanced by adding features like online payment integration, QR code-based entry system, mobile application support, and real-time notifications.

Conclusion

The Event Management System provides a reliable and efficient solution for managing events digitally. It simplifies the process for both users and organizers, making event handling more organized and effective.
